CAREER OBJECTIVE

Aspiring engineer with hands-on experience in machine learning, web development, and data-driven projects, seeking opportunities to build practical solutions, solve real-world problems, and grow in a technology-driven environment

EDUCATION

2023-2027
Kongu Engineering College
- B.Tech (Artificial Intelligence and Machine Learning)
- CGPA: 8.70(till 6th semester)

2022-2023
Alphonsa Matriculation Hr. Sec. School
- Higher Secondary(89.67%)

2020-2021
Kumari Matriculation Hr. Sec. School
- SSLC

AREAS OF INTEREST

- Frontend Development
- Backend Development
- Machine Learning
- Data Analysis

TECH STACK

- Web Development: React.js, Node.js
- Frontend: HTML, Bootstrap, CSS, JavaScript
- Database: MongoDB, MySQL
- Version Control: Git, GitHub
- Generative AI: LLMs, RAG
- Tools & Libraries: Power BI, TensorFlow, Keras, Scikit-learn, NLTK

LANGUAGES

- Python
- Java

LEADERSHIP ACTIVITIES

- Placement Coordinator(2024-2027)
- Class Representative(2025-2026)
- Treasurer, CUG club of KEC
- NSS Volunteer(2024 - 2026)

PROJECTS

Internship Finder

- Developed a React-based internship management platform that enables students to search, track, and organize internship opportunities in one place.
- Built using React and JavaScript for dynamic functionality, with HTML and CSS for designing a user-friendly interface.

Tournament Booking System

- Developed a React-based tournament slot booking system that allows users to reserve slots with real-time availability updates.
- Implemented using React and JavaScript for dynamic booking logic, with HTML and CSS for an interactive and responsive user interface.

Placement Analytics Dashboard

- Developed an interactive Placement Analytics Dashboard using Microsoft Power BI to analyze placement trends, CGPA performance, and branch-wise insights across 2,20,000+ student records.
- Implemented responsive KPI dashboards and data visualizations to identify salary patterns and the impact of Machine Learning, DSA, and academic performance on placements.

Sign Language Prediction using deep learning

- Developed a deep learning–based web application that predicts sign language alphabets in real time using webcam input and a Convolutional Neural Network (CNN) model.
- Implemented using Python for model development and HTML for the user interface to enable easy browser-based interaction.

Contact list application

- Developed a React-based contact management application that allows users to add, search, delete, and restore contacts efficiently.
- Implemented using React and JavaScript for functionality, with HTML and CSS for responsive user interface design.

ACHEIVEMENTS

- Received Academic Excellence Awards for two consecutive years (2023–2024 & 2024–2025)
- Participated in Internal Smart India Hackathon at College Level
- Secured First Prize in Paper Presentation at KEC (Newells'24)
- Secured Second Prize in Paper Presentation at KSR (Spring Fest'24)

CERTIFICATIONS

- NPTEL:
  - Affective Computing - 2025
  - Responsible & Safe AI Systems - 2025
  - User-centric Computing for Human Computer Interaction - 2026
- MongoDB:
  - MongoDB Certified Associate Developer(Node.js) - 2025
